

COR-A-VENT[®] **Siding Vent System** **Protects Your** **Siding & Finish** **from Moisture Damage**

NEW!
Sturdi-Strip

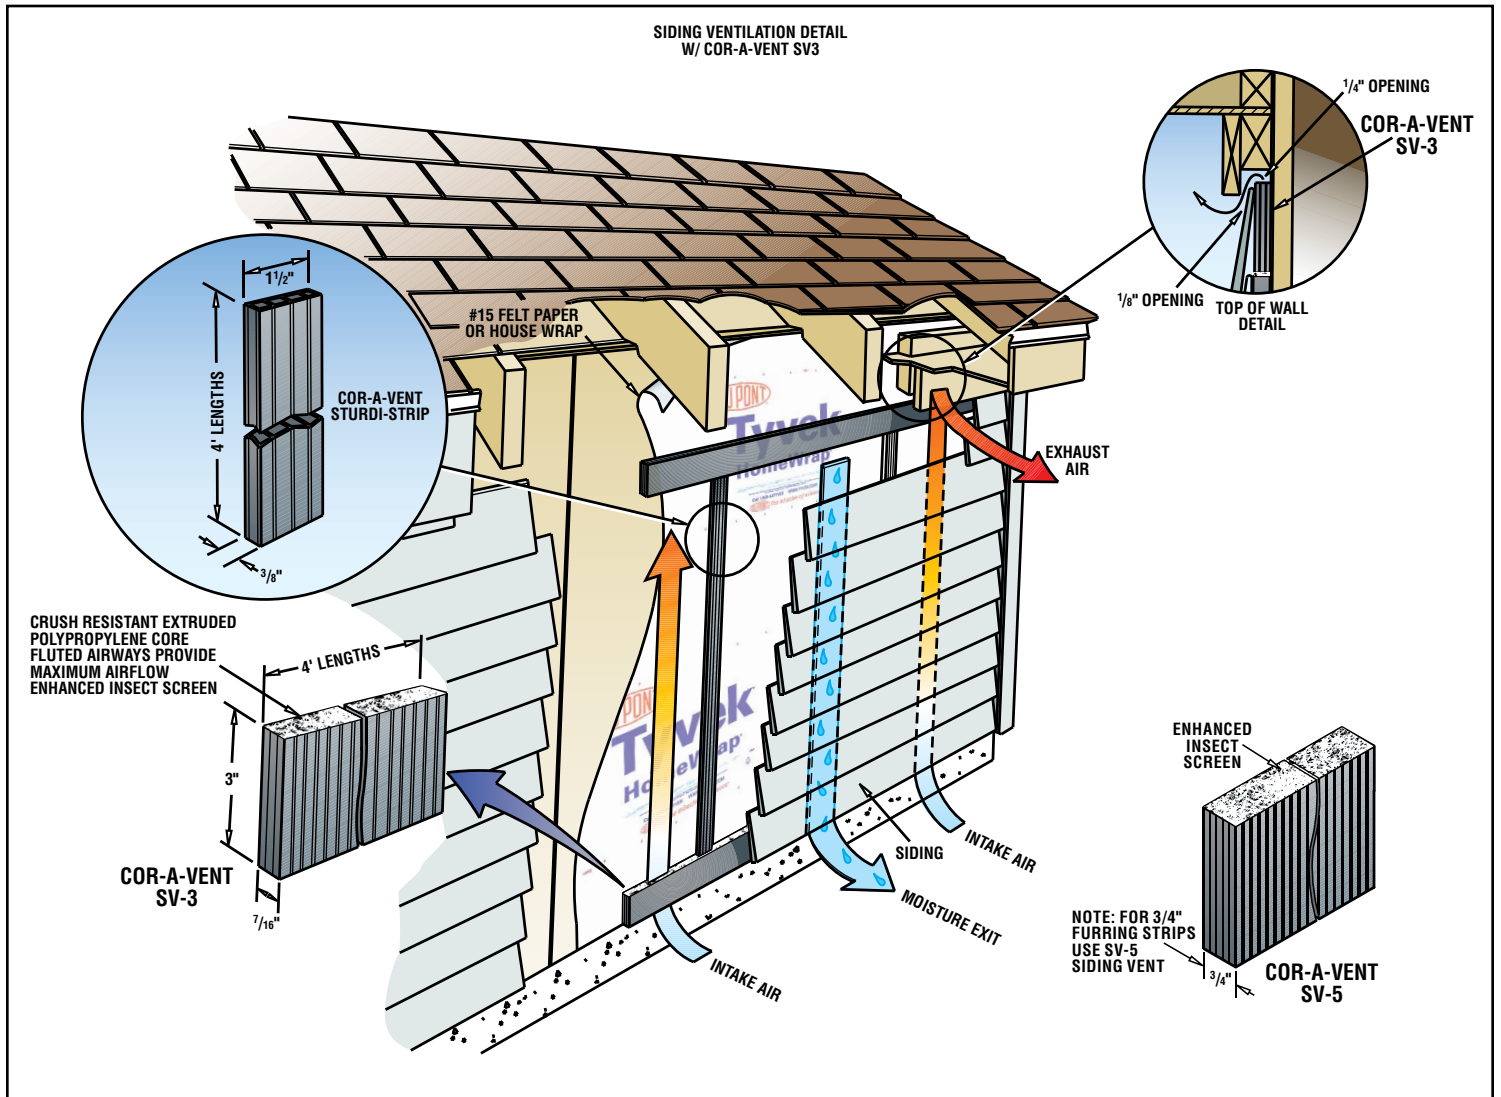

COR-A-VENT's Siding Vent System is perfect for creating a superior and cost-effective rain screen system behind wood or fiber-cement siding. The Siding Vent System (SVS) promotes the natural removal of moisture from behind exterior siding and adds life to your home's exterior. And unlike other rain screen systems, COR-A-VENT's SVS will save you money, both up front and in the long run. The SVS features SV-3 Siding Vent, a 7/16" thick by 3" tall by 4-foot long strip wrapped with our Enhanced Insect Screen, and the NEW Sturdi-Strips™ plastic furring strips.

INSTALLATION IS EASY – Siding Vents and Sturdi-Strips are made from durable, compression resistant PP plastic sheets that can be power-nailed or screwed on without cracking, splitting or compressing. Sturdi-Strips are the superior and affordable alternative to wood or lath furring strips because they won't split, warp or rot.

COR-A-VENT[®]
A Trusted Name in Attic Ventilation Since 1976[®]

The Siding Vent System keeps your wall dry.

Trapped moisture behind your siding can wreak havoc on your home's exterior, causing peeling paint, rotting wood, deteriorating underlayment and mold and mildew growth. COR-A-VENT® Siding Vents and Sturdi-Strips allow that moisture to drain out and let air pass through to keep your wall system dry.

COR-A-VENT Siding Vents will add life to your building materials.

Moisture isn't the only potential problem in your wall system. Surfactants from fiber cement siding and tannins from wood siding can eat away the housewrap underneath. COR-A-VENT Siding Vents and Sturdi-Strips space the siding away from the housewrap to prolong the life of your building materials.
